X-RAY POLICY

Radiographs (X-rays) are done to provide necessary information for us to deliver quality dental care to our patients. We strive to keep x-ray use to a minimum but they are a very important part of dental treatment. We also utilize the latest in digital x-ray technology which greatly decreases radiation exposure during dental x-rays.

While some dental insurance companies have recently changed their policies on reimbursement for dental x-rays we will not compromise our patient's care because of an insurance company's rule. Our policy is to use dental x-rays when they are required in our patient's treatment. We will file dental insurance claims but any procedures not covered by that insurance will be the patient's responsibility.

Our diagnostic and preventative policy is to require a panoramic x-ray every three to five years and bitewing x-rays yearly. Individual examinations or diagnosis could present a need to increase the frequency of such x-rays. X-rays taken prior to your initial visit may be used to satisfy the need for required x-rays at our office. As a courtesy our staff will be happy to assist you in obtaining copies of prior x-rays. If you are an established patient please inform us if you have had x-rays taken at another office such as an orthodontist or oral surgeon so we can try and obtain those for your exam.
